To Whom It May Concern,

Teledyne Isco located at 4700 Superior Street in Lincoln NE., is the Sole source manufacturer of the following ISCO brand products;

- The 2100 series flow loggers for collection system flow monitoring including Area Velocity sensors, ultrasonic sensors, LaserFlow sensors and cell modems used to push data to DeKalb Servers running Flow Link Pro.
- Signature flow meters for open channel flow using one or more sensors such as bubblers, ultrasonic, Area Velocity, LaserFlow and other accessory sensors and come in permanent and portable versions that can be powered by AC or Battery.
- ISCO samplers in portable or permanent versions, to include all model numbers 6712, 3700, 5800, GLS and Avalanche using peristaltic pump technology, and QCEC refrigerated and portable samplers using vacuum pump technology.
- AccQlink remote cloud based logger with built-in cell modem that includes data hosting and cell service.
- ADFM pulse Doppler flow meters
- Clamp on full pipe transit time and Doppler flow meters

Flow Link Software is proprietary software already licensed by DeKalb County that allows the end user to program and download data from meters. The data can be collected from each site by programming the cell modem to send all stored parameters to the DeKalb County SQL server once a day so that field crews do not have to drive to each site to collect the data stored in the meters.

Kazmier & Associates located at 6575-B Industrial Way, Alpharetta GA., is our exclusive representative for the entire state of GA., for Isco products discussed in this letter.

Sincerely,

Sharon Fischer
