CC: Clyde Stovall, Director – Facilities Management
SUBJECT: Design and Implement Voice and Data Network for 178 Sam's Street
DATE: April 14, 2020

DeKalb County Innovation and Technology Department is requesting Purchasing and Contracting's assistance in preparing a BOC agenda item with Layer 3, LLC utilizing State of GA Juniper Networks Contract # 99999- SPD-T20120501-0013.

The purpose of this project is to design and implement the voice and data network required to support staff that will be located at 178 Sam's Street. The existing networking equipment installed by the State of Georgia to support DFACS and other state agencies is obsolete and will not meet our business requirements. Layer 3 is our current managed network professional services provider; therefore, they can design and implement the voice and data network that will work seamlessly with our existing county-wide network. They designed our network security protocols and are fully qualified to extend the county network to the Sam's Street location. It is extremely important that the Sam's Street location network seamlessly integrate with our existing county network to ensure all security protocols are implemented and our network design is not impacted.

This request is funded through the Facilities Sam's Street CIP Project: 105095; Org: 81110; Exp: 541301; Task 01; Award 602153. The total amount for this project is \$116,740.40.

If additional information is required, please contact Angela Green (404-371-2374).
