SUBJECT: Data Storage System for DWM Consent Decree Program (State of Georgia Contract Number 99999-SPD0000139-0005)

DATE: November 12, 2019

The Department of Innovation & Technology is seeking Purchasing and Contracting assistance in preparing an agenda item for approval by the Board of Commissioners to procure a NetApp E-Series Data Storage System in support of the Department of Watershed Management Consent Decree Program. The purpose of the equipment is to serve as a data repository for all Consent Decree related data storage needs. The data will consist of a combination of video, database, and project administrative files along with providing capacity for future growth. The existing data storage infrastructure is obsolete and requires replacement to provide required access and improve the reliability of the key data used in the Consent Decree program. The attached specifications include the necessary equipment and associated quantities required to implement the entire system. Based on the responses, DoIT suggests awarding to the lowest responsible and responsive bidder, ProSys. The pricing received is based on utilizing the State of Georgia contract number is 99999-SPD0000139-0005. equipment and related implementation services. This NetApp storage solution is a commodity item and the most advantageous prices are obtained utilizing the State of Georgia contract that includes significant discount prices based on the volume of all state purchases. The total amount for this solution is \$196,536.26.

During the implementation phase we will migrate all existing data from various locations to the new storage system. The NetApp service provider will be responsible for the setup and implementation of the equipment using a combination of county staff and contracted professional services included in the bid specifications. Because this equipment is replacing existing obsolete technical infrastructure and must work with existing enterprise system management infrastructure, the equipment must be NetApp branded and must be integrated seamlessly into the existing enterprise storage management system for compatibility with existing implementations. The new equipment will be installed and merged with existing equipment, therefore no substitutions can be allowed in order to fully utilize our existing data migration software tools and scripts. The equipment must also be new with no refurbished or remanufactured parts or equipment included. The equipment must be fully assembled and prepared for installation upon delivery to DeKalb County Government.
