## Design Assistance & Quotations

Richard Hanson

## THE FOUNDER

### Richard Hanson

A 1989 industrial engineering graduate of Georgia Tech, Richard spent his entire career in water pressure control. First as a manufacturer at Watts Regulator, and other control valve companies, covering the Southeast and Atlanta. Then 20 years at SyncroFlo, in every department: Engineering, Marketing, Sales, IT, Finance, Accounting, Field etc. It was there that he discovered rainwater harvesting, starting with Gwinnett County Schools' use of alternative water supplies for Puerto Rico, and culminating in offering treatment and pumping solutions.

After a friendly parting, he founded the rep company Georgia Water Tanks in 2014. His goal is for rainwater harvesting to be considered a standard practice where stormwater management is required.

### Formal Education:

Industrial and Systems Engineering, Georgia Tech

### Continuing Education:

ABPA Backflow Preventer Technician  
 Hydraulic Institute - Pump Systems Matter -  
 American Rainwater Catchment Systems Association (ARCS)

### Factory Training:

Watts Regulator - backflow preventers, water & steam PRV's, valves, galvanic corrosion, thermal expansion, steam traps  
 QuantumFlo domestic water boosters, irrigation, rainwater harvesting  
 SyncroFlo-domestic water boosters, municipal pumping, golf course  
 Watts ACV/Muesco control valves  
 Goulds Commercial Pumps
